

Priya Raghavan

Software Engineer

(415) 555-0148 | San Francisco, CA | priya.raghavan@example.com | linkedin.com/in/priya-raghavan | github.com/praghavan

SUMMARY

Software engineer with 4 years building high-traffic web services in Python and TypeScript. Shipped payment and search features used by 2M+ monthly users, and cut infrastructure cost 28% by rearchitecting the data ingestion path. Looking for backend-leaning product engineering work at scale.

SKILLS

Languages: Python, TypeScript, Go, SQL, Java

Backend: Django, FastAPI, Node.js, gRPC, PostgreSQL, Redis, Kafka

Frontend: React, Next.js, TailwindCSS, Jest

Cloud & Tooling: AWS (ECS, Lambda, RDS, S3), Docker, Terraform, GitHub Actions, Datadog

Practices: Distributed systems, API design, CI/CD, Agile, Code review

EXPERIENCE

Software Engineer II

Stripe-scale Payments Startup

Mar 2023 – Present

San Francisco, CA

- Rebuilt the settlement reconciliation service in Go, cutting nightly batch runtime from 4.5 hours to 22 minutes and eliminating a recurring on-call page.
- Designed and shipped an idempotent refunds API handling 40K requests/day with 99.98% success rate across three payment processors.
- Reduced AWS spend 28% (\$18K/month) by moving ingestion from always-on EC2 to event-driven Lambda with S3 partitioning.
- Mentored 2 junior engineers through their first production launches; both promoted within a year.

Software Engineer

Retail Analytics Company

Jul 2021 – Feb 2023

Austin, TX

- Built a React and TypeScript merchant dashboard adopted by 1,200 stores, lifting weekly active usage 35%.
- Migrated 60+ REST endpoints to a typed gRPC layer, dropping p95 latency from 480ms to 140ms.
- Added contract tests and CI gating that reduced production regressions 45% quarter over quarter.

PROJECTS

Ledgerlite | Go, PostgreSQL, Docker

github.com/praghavan/ledgerlite

- Open-source double-entry accounting engine; 900+ GitHub stars and used by 3 fintech startups in production.
- Sustains 12K writes/second on a single node through batched WAL commits.

Transit Delay Predictor | Python, scikit-learn, FastAPI

2022

- Trained a gradient-boosted model on 5 years of BART data predicting delays within 3 minutes, 87% of the time.

EDUCATION

B.S. in Computer Science

University of Texas at Austin

May 2021

Austin, TX

CERTIFICATIONS

- AWS Certified Solutions Architect – Associate (2024)
- HashiCorp Certified: Terraform Associate (2023)
